Major Activities in 2003	47

Foreword

In the context of the German/Ghanaian co-operation, the Federal Government of Germany has supported the private construction industry in Ghana. Currently it supports the promotion of Small and Medium Scaled Enterprises (SME) Project. This project is a component of the GTZ/GHA Road Maintenance Project. Partners in this initiative are the German Technical Co-operation (GTZ), the Ghana Highway Authority (GHA), the Association of Road Contractors of Ghana (ASROC) and the Ghana Institution of Engineers (GhIE).

The project aims at strengthening the associations as well as individual enterprises working in the road sector. The first practical step was the design and implementation of a training programme for private contractors in the road sector.

In the course of the design of the training programme, other organisations joined the partnership and have not only expanded the scope of the partnership, but many of them have brought their own experiences and introduced additional programmes. Some of the new entrants are German public and private organisations. This has led to the establishment of more projects and programmes along the lines of public private partnership.

The partnership has grown into a network to the benefit all. The network seeks to strengthen co-operation amongst institutions, enterprises and organisations (both public and private) in Ghana and Germany.

A major objective of the network is to ensure that partners in both Ghana and Germany contribute towards any joint programme and also benefit from any joint endeavours. All organisations are encouraged to examine areas where they can make a contribution or collaborate with other partners to their mutual benefit.

LSTW is a German company specialized in stabilisation and immobilisation technique's converting unsuitable or marginal soils or other natural sources into a strong and stable material. Worldwide, especially in Europe our technique is used extensively as a proven and preferred option for achieving excellent load bearing values. Our typical application field is the stabilisation of capping layers and subbases for all type of traffic infrastructures. In order to be competitive with the accent on quality we developed a worldwide patented product with the trivial name ROVO - Super stabilisation medium for stabilisation and immobilization purposes. LSTW in cooperation with Mega Tech Engineering Consultancy as construction designer is firmly established as the most experienced German contractor.
